

GLOBAL ENERGY MANAGEMENT STANDARD

Introducing ISO 50001 helps you to, above all save costs, as you'll be capturing energy users in your organisation automatically and thus are able to discover large savings potentials. This helps the environment and will make you more cost efficient.

Why Energy Management?

By means of the international ISO 50001 norm (energy management systems), you can achieve a better systematisation to increase energy efficiency in your company.

Clear advantages include:

- Consistent organisation*
- Transparent energy data*
- Uncovering optimization possibilities*
- Energy and resource savings*
- Improved operating results*

Embedding in EMAS/ISO14001

If you already have an environment management system in your company, it will offer the optimal starting point for effective energy management.

We'll be pleased to show you how you can best combine both systems.

We'll support you with the introduction or certification of energy management systems.

In cooperation with you, we'll come up with realistic energy data, develop meaningful key figures and support you in the development of meaningful energy goals.

We'll also arrange for complete documentation of energy management.

If you only want to achieve ISO 50001 certification, we'll be happy to complete this process for you!

Our Experience

By now, ISO 50001 has reached high acceptance globally. Particularly in Germany, where Intechnica has introduced and certified a number of energy management systems, the system is employed as an effective planning and controlling instrument to increase energy efficiency in companies of all sizes.

Ultimately, it serves as a prerequisite for tax capping under the terms of the Electricity and Energy Tax Act as well as the basis for refunds based on the EEG apportionment refund.

Additional benefits for you!

In addition to significant energy savings, you will reduce greenhouse gas emissions as well as other environmental impacts. Moreover, you'll get a picture of your "carbon footprint", which is mentioned more and more often in customer enquiries.
